

Attic Nozzle Kit

Designed to be used as a large portable sprinkler system for use in attic areas of residential buildings to large scale apartments, hotels, and commercial buildings, etc.

Easy to deploy, by extending the nozzles equally from the peak of the roof or the area that you wish to establish a water wall (Note, hose is marked in the middle). The nozzles can be driven in with a sledge hammer or by creating a small hole with a fire ax or depending on the roofing material, a chain saw or other cutting equipment to gain entry. You can daisy chain them together for more coverage or add a hand line on the end.

125 GMP / 50 Ft span.

- 974 Comes with two complete 975's plus, one 25' hose section
- 975 Includes built in safety handle for use when nozzle is being driven in, 8" retainer plate, standard nozzle, strike plate and NST coupling, and end cap are standard.
- 972 Same as 974, with a water shut off valve included.
